

## The Most Versatile Spray Gun on the Market!

Preval comes in two parts: a pressurized power unit and a glass jar. The two pieces attach by twisting on the jar to the bottom of the aerosol unit. The Preval spray system is meant to be refillable and is small enough to be portable, whether you place it in your tool box, under the sink, or in your pocket.

Preval is a patented two part spray system that can be used for any number of household and commercial projects. Whether you are stenciling, staining a piece of furniture, or need an industrial two component coating, Preval is your choice!

The Preval Sprayer is a versatile spray applicator for all kinds of liquids. Each Preval Spray Gun comes with a refillable container jar that can hold whatever fluid you choose and a power unit that sprays up to 16 oz. of liquid, depending on viscosity. The power units are disposable, when depleted replace with a new power unit. And best of all – you can change jars for different uses!

Similar to commercial grade sprayers, the Preval Spray Gun always produces professional results. And, Preval is a fraction of the cost of other professional sprayers on the market.
